DETAILED ACTION

1. This is the First Office Action on the Merits from the examiner in charge of this application.

Specification

2. The abstract of the disclosure is objected to because it includes legal phraseology such as "present invention", and is more than 150 words. Correction is required. See MPEP § 608.01(b).
3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by USP 6,010,200 to Hays.

Art Unit: 3637

Hays discloses a rail fixing part structure comprising all the elements recited in the above listed claims including, such as shown in Fig 2-5, a metal rail 26 slidably supporting a synthetic resin drawer 10 housed in a body, said metal rail fixed to said drawer 10, a flange provided at said rail, said flange extending toward said drawer 10, ribs 30 provided at a side surface of said drawer, said ribs vertically sandwiching said flange, a screw-in part provided at said drawer being connected to said flange so that said flange is sandwich between said ribs.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Salice, Marley, Henriott et al, King, Benbow, Lautenschlager, and Reinhardt all show structures similar to various elements of applicant's disclosure.
